

AV Industry **Awards 2023**

Report

Industry Awards
www.copperleaf.media

Key Observations

In general, industry awards offer a very good way to get yourself some publicity, but in many cases you can't seriously claim that your win was adequately and fairly judged.

Many industry awards need a shake-up. They need to be much more honest, open and competent. They need to properly embrace innovation, green issues and newcomers to the industry. Younger people need to attend their events. They need to properly explain why each winner won and be gracious when receiving complaints or criticism. They also need to move away from being almost entirely judged by middle aged white men.

The almost complete lack of interest and competence in promoting environmental initiatives is shocking.

In 2024 the Las Vegas Sphere may cause a headache for several awards. We identified at least 24 awards that the project could win. Awards organisers need to seriously think about how to deal with the fact that many others may not enter in multiple categories.

About Copper Leaf

Copper Leaf is a creative content, marketing and PR agency with a technical edge serving the Audio, AV, Broadcast and Entertainment Technology industries. We offer a unique combination of in-depth knowledge of audio and audio-visual systems, supporting marketing teams with the creation of graphics, video, case studies, web sites, PR and more.

Our talented team of digital design and production specialists, writers and technical consultants are at your disposal to help you be the best that you can be.

Executive Summary

This is the third edition of our awards report and it is already becoming a benchmark document for many companies to decide which awards to enter and how much credibility each award has.

Industry awards are important to many of us. Companies go to great efforts preparing entries, attending the events and promoting any success they might have. It is important that entrants and attendees have confidence in the awards they choose to be involved with.

Most awards offer good exposure for both winners and shortlisted entrants. However, the majority have serious shortcomings in how much information they give about their awards, how they are judged and for some there is a clear pattern of repeat winners. We researched how each award is organised and judged, although some didn't give us details. If organisers won't give information to the industry, this raises questions about both the transparency and competency of their judging process.

Most awards did not have processes in place that prevent the organiser from skewing the result if they chose to do so. Judging is generally a patchwork affair, often with a lack of scrutiny of the judging process, using judges who aren't qualified, asking judges to review too many entries, or discrepancies over how scores are calculated.

Our research into technology awards now has up to nine years of past winners data. Some awards have many of the same winners year after year. Our research clearly shows that awards with the widest variety of winners have more rigorous judging processes and were also the most transparent about how they operate their awards.

Repeat Winners

Based on nine years of technology/product winners:

The **ABTT Awards** have the most diverse set of winners with only two companies ever winning more than once

For **rAVe Readers' Choice**, ten companies have won 68% of all awards, of which Barco alone has won 15%

10 companies win 50% of all **InAVation awards**

12% of all **CI Best awards** have been won by Crestron

CI Integration Awards are the easiest at nearly 40%. The **PLASA awards** had just 33 entries.

There is an almost complete lack of diversity in the judging panels. The vast majority of judges are middle aged and older white men. Some awards have reasonable female representation, and none of the awards have much ethnic diversity on their panels.

If you don't win, our advice to entrants is not to complain, it won't make any difference. Organisers in general are very protective of their awards and the vast majority do not respond well to criticism. This is a contributing factor to the shortcomings of certain industry awards. Some industry awards programs are somewhat arrogant about their own integrity and importance, often overlooking the considerable effort and expense entrants put into creating their submissions and attending the events.

Finally, green issues are barely considered. Fewer than a quarter have green awards, and none use judges with any real knowledge or experience of environmental issues.

The Scores

Our assessment of awards has remained largely the same as for 2023. The chart below does not tell the whole story. For the detailed analysis, please look at our accompanying spreadsheets.

Only ABTT, NAMM and PLASA have procedures in place to make it physically impossible for the organiser to unfairly influence the result.

In terms of overall quality of judging process: for product awards, ABTT and PLASA are the best. For project, company and people awards, the AV Awards are the best, but there are shortcomings with their green award.

Both RAVE awards, all Future Magazine Best of Show Awards and InAVation awards all have serious shortcomings but offer good publicity if you don't care about how they are judged.

If organisers aren't open about their awards why should the industry invest in them?

AWARDS	IS THE AWARDS PROCESS CLEARLY & OPENLY EXPLAINED?	HOW RIGOROUS IS THE JUDGING?	ARE THERE PROCEDURES TO AVOID BIAS AND CORRUPTION?	WILLINGNESS TO ANSWER ENQUIRIES	MEDIA EXPOSURE IN SHORTLIST PERIOD	MEDIA EXPOSURE FOR WINNERS

What is Your Chance of Winning?

Based on the approximate number of entries and the number of awards, we calculated the chance of winning for each as follows:

AWARDS	WINNING LIKELIHOOD %
ABTT	26
AV	7.7
AV NEWS	N/A
BaM	6.6
CI BEST	21
EPI	8.75
IABM Bam (IBC/NAB)	6.6
InAVation	8.3
CI INTEGRATION	37.7
MONDO AMERICAS	10
MONDO APAC	6.67
MONDO EMEA	6.67
NAMM TEC	3.1
PARNELLI	N/A
PLASA	16
rAVe Readers' Choice	N/A
TNT	14
TPMEA	2.8

No Direct Evidence of Pay to Win

Whilst some are free, most awards charge an entry fee to cover the costs of admin, judging expenses, staging costs, and trophies. Some use any excess to make charitable donations and for others, fees are used as a revenue stream.

Those who do not charge for awards still have costs they have to cover. Theoretically, any payments to that organiser could be used to influence the outcome, it does not have to be a payment directly associated with an award. To prevent this, safeguards need to be in place.

A payment to enter may prevent some from submitting an excessive amount of entries, but this can also serve as a barrier to small companies. One organiser confirmed that they allow some free entries on a case-by-case basis, where the entrant could not be reasonably expected to pay to enter.

Awards that are free still have
to be paid for somehow

Knowing the number of entries against the number of awards enables us to calculate the chance of winning and helps answer the question as to whether any awards are 'pay to win'. If the chance to win against the number of entries is low, then the fee cannot have any influence on the outcome. For example, if there are twenty entries for a category then you only have a 5% chance of winning. In this example, it is not clear how so many paying the same entry fee could influence any individual.

No Evidence of Bribery and Corruption

It is impossible to accurately assess bribery and corruption, or what may or may not occur behind the scenes. For a number of awards, the names of the judges are kept hidden to ensure the judges are not hassled by the entrants.

In reality, the likelihood of influencing judges whose names are public is slim. In many cases, the judges do not assess all of the entries, so they may not be judging your award anyway. We also think it unlikely that an entrant would approach a judge whom they didn't know to offer a bribe as there is a risk that that the judge may report it. Under UK law, bribing an awards judge for commercial gain would fall under the 2010 Bribery Act.

We strongly doubt that bribery takes place or has any effect on the result of any awards we researched. Our concerns about fairness of awards lie with the organisers.

For many awards the voting is handled entirely by organiser, so it is possible for the results to be ignored or altered. Judges' scores and internet votes could be manipulated. This is why truly independent measures should be implemented. Using someone from a different department isn't enough.

Our concerns about fairness of awards lie with the organisers

Third party individuals - not connected to the awards organiser - should be employed to check the votes to eliminate corruption of results. A local legal or accounting firm would charge a modest fee for collating and issuing the scores to the organiser.

Income and Inclusivity

Awards help fund some of our industry press, so it is perfectly reasonable that entry fees, sponsorship and/or ticket sales generate a profit, but income should not influence who wins.

Some larger companies put considerable resources into awards. As a result, smaller companies who do not have the wherewithal to produce such sophisticated entries may be penalised. The ticket price for some awards ceremonies is extremely high, especially when coupled with travel, accommodation etc. Again, small companies, freelancers and newcomers usually do not come to these events.

These potential barriers to entry have to be balanced against the fact that the awards may be an important source of income for the organiser helping sustain their overall industry activity.

Sustainability

An important focus in our research was sustainability and the increased efforts made by organisations within the AV industry to be green. We asked if they award those who deserve recognition for forward-thinking and finding solutions to improve an already challenging industry. We found that only five industry awards have a green award: AV, AV News, AVard, CI Integration, PLASA and Sports TV.

We asked whether their trophies are sustainable; typically glass or metal. Not plastic! It would be quite hypocritical to have a green award on offer and then hand them a plastic trophy.

We were disappointed that InAVate withdrew their green award for 2024, claiming that this is incorporated into all their entries.

Their only criteria is: How are you doing your bit for the environment? We don't feel that this is sufficient and urge InAVate to bring sustainability back as a standalone category.

Whilst we have praise for the AV Awards in general, their Green award is an exception. They brought the category back for 2023. But the green judging process is completely opaque and the award breaks their own entry criteria.

All other judges are named, but no information is given on how the green award is awarded and who it is judged by. The winner of this year's award was not incorporated as a company until August 2023 two months after the awards closing date. It did not even have a website at that time, let alone any track record of delivery, projects, customers or any financial records. Whilst the winner sounds like a good initiative, it could not have been able to prove any of its claims. This calls into question the competence of AV Magazine's judging of this category.

Only six industry awards have
a green award

What Exposure you get

We have tried to assess how beneficial each award is. To do this, we picked random shortlisted and winning entries for each award and then looked at the publication (print and digital) and reviewed how much editorial was published and how much effort the organiser put into social media for each winner or shortlisted entrant.

Do not rely on others to communicate your success

Our calculations cannot be considered anything other than estimates and coverage could be extremely variable. Our advice for those shortlisted and award winners is not to rely on others to communicate your success.

Why did it win?

Many industry awards do not explain why the entrant won. This is a significant omission. Some will read a few lines explaining the reason as the winners go up on stage. Few augment this with any subsequent editorial on the merits of the win.

No award has any formal process for feedback if people are upset about not winning. Some are willing to take calls on an informal basis to explain why.

Organisers need to be sensitive to the time and expense entrants put into awards, but our experience is that they have a bad attitude towards complaints.

We are aware of two companies who no longer enter the AV Awards because of rude replies when making reasonable enquiries as to why they didn't win - and there may be more.

Assessment of Past Technology Winners

We put a specific focus on technology wins because manufacturers are the biggest source of income for industry publications.

For technology categories, we wanted to see if there was any pattern of winners. We reviewed up to eight years of winners across several awards. Sometimes there have been gaps due to the COVID pandemic.

It is not possible to investigate the relationship between winners and volume of advertising in the related magazine. Companies, especially manufacturers, employ magazines for many marketing activities.

Where technology awards are concerned, our data suggests that free entry does not guarantee an even playing field for smaller companies or newcomers looking for acknowledgment in awards. Entry fees are just one aspect of the awards process but their influence does not appear to be significant. Our research demonstrates that free-to-enter is not necessarily an indicator of award integrity.

Free to enter awards do not
have more integrity

Repeat Winners?

An often-heard comment is that the same companies win every year, so we set out to see whether that is true. Using nine years of data we added up the total number of technology/product awards given by each organiser.

We then calculated how many different companies have won. This gave us a percentage of 'unique' winners. The higher the percentage the more diverse the set of winners are. Awards with unique winner percentages of less than 50% means that more than half are repeat winners.

We used nine years of data to track for repeat winners

Unique Technology Winners

AWARDS	UNIQUE WINNERS	CHANGE FROM 2022
ABTT Awards	96%	up 4%
AV News	72%	up 1%
AV Awards	82%	No change
AVard	88%	up 4%
CI Best	44%	down 1%
InAVation Awards	50%	up 1%
Parnelli Awards	75%	down 4%
PLASA Awards	75%	down 1%
rAVe Readers' Choice Awards	38%	down 3%

This table shows what percentage of wins are unique.

AV Industry Judged by White Men

Where we know who the judges are, the vast majority of judges are white men. Notably, ABTT makes huge efforts towards 50:50 parity between male and female judges, and PLASA say they work hard for female representation, but in 2023 had only one female judge. In 2022 the CI Awards had no gender diversity across their panel of judges, we don't know if this improved for 2023.

We asked about ethnic diversity of judges but from those who responded none were able to give any reasonable response. Many of the awards said their selection of judges is becoming more centred around diversity as a whole, which begins with including people from a range of backgrounds to honour their values of inclusivity and equality within the AV industry. However, the evidence simply isn't there to back up any of these intentions.

The Las Vegas Sphere – The Elephant in the Room for 2024 Awards

If you haven't heard of the Sphere in Las Vegas then you shouldn't be working in this industry! It is the most technologically advanced venue in the world and has set a new bar for the industry. It is so much more advanced than anything else our industry has ever done.

The project is so important that it could win many awards in 2024, so is it worth other companies even bothering to enter in those categories? This causes a headache for awards organisers who may find that they get few entrants in a variety of categories. In some cases the Sphere could be a significant percentage of the awards.

Las Vegas Sphere could affect
around 24 industry awards

It may be easier for the awards organisers to create a special award for the different teams and manufacturers behind the project and the products used.

List of Awards That the Sphere Might Win in 2024

AV Awards

- ▶ Consultancy of the Year
- ▶ Digital Signage Project of the Year
- ▶ Event Technology of the Year
- ▶ Venue Project of the Year
- ▶ Visual Technology of the Year

Parnelli Awards

- ▶ Video Production Company of the Year
- ▶ Video Director of the Year
- ▶ Indispensable Technology: Video

InAVation Awards

- ▶ Leisure & Entertainment Facility
- ▶ Smart Buildings Award
- ▶ Applied Technology Award
- ▶ Company of the year
- ▶ Content, Streaming & Broadcast
- ▶ Digital Signage

AVard

- ▶ Best Integration Design
- ▶ Best Innovative Integration
- ▶ Smartest Integration
- ▶ Best Public Integration
- ▶ Industry Member of the Year

AV news Awards

- ▶ AV Project of the Year
- ▶ Outstanding Achievement in AV

Mondo Awards

- ▶ Arena
- ▶ Concert Hall
- ▶ Multipurpose venue

Types of Award

Product

These are aimed at manufacturers, highlighting new innovations.

Project

These cover completed projects in different categories, explaining how technology was applied in challenging or innovative ways.

People/Company or Team

These are often categorised, highlighting high standards, quality of service, rising stars or particular individual achievements.

Green

Given to companies, products or projects that demonstrate environmental credentials.

Special awards

These are lifetime achievements or some type of editor's choice. Given that these are open about being completely discretionary we have not covered these in this report.

Summary

There are too many cases where insufficient care is put into the judging process. We are not accusing anyone of dishonesty. We have accepted every statement that organisers have given as fact.

However, most awards processes do not ensure entries are being judged properly by competent people.

Many awards are given without anyone physically seeing the product or meeting the people.

For product awards, ideally judges would interact with the product, but this is rare. For company and team awards, ideally the entrants should be interviewed, either in person or by video conference, but this also is rare.

Companies put huge amounts of time and sometimes spend a great deal of money preparing entries. But for them to feel confident about doing so, they need to be sure that the awards process is competent and honest. To achieve that, some – if not most – awards need to be more transparent or to improve their processes, or both.

Shortlisted entrants give up valuable time from work and spend considerable amounts on travel and accommodation just to attend awards ceremonies. With this in mind, the integrity of awards should not be taken lightly. Entrants should ask questions if there are parts of the process which are unclear to them.

Given the effort some organisers expect entrants to put into entering, we were disappointed that only three awards agreed to participate in our research; the majority did not respond to our emails asking them to spare just a few moments of their time to get involved in our research. InAVate specifically refused to participate, and rAVe emailed over what limited information they felt necessary for us to know.

Since our 2019 report, more organisations are giving out sustainability awards. But, like PLASA in 2019, the awards we spoke to explained that they are not freely handed out every year; only when it is truly deserved.

Companies put huge amounts of time and sometimes spend a great deal to money preparing entries

The organisations we connected with acknowledge that the value of these awards is limited unless they bring in environmental specialists to judge these separately. In line with green initiatives, more awards have made the move from plastic trophies, to sustainable, glass or metal trophies/plaques.

For all awards there is no perfect solution, and our advice is if you want to avoid controversy, don't hold an awards competition! However, we mustn't forget the overall benefits that the staging of these awards brings to our industry.

About each award:

ABTT Annual Theatre Show

Product

Project

People/Company
or Team

Description

The ABTT Annual Theatre Show Awards in London originally started in 1976 and were only hosted alongside the ABTT Theatre Show from 1984. This has progressed from the initial “product of the year” in 1979’s Awards to now nominated products in a variety of categories. These include: “engineering”, “sound”, “lighting”, “widget” and now extend to “stand of the year”. ABTT also award ‘Technician of the Year’ at the awards presentation. This runs separately to the Theatre Awards and nominations are received throughout the year.

There is no entry fee for the ABTT Annual Theatre Show awards. In terms of direct entry, product awards are open to any company or individual whose products are substantially new to the market during the last twelve months, and are available now for purchase, immediate delivery and use.

Entrants can submit details in advance to promote their entry the best they can and advantage themselves. Whilst applicants are encouraged to submit their entries prior to the show, new entries will be accepted on the day of the event and adjudicated equally. Judges may also enter exhibitors who did not enter themselves but appear to have a particularly innovative product at the show. The entries must meet the five core values when taking into consideration EDI - one being to promote equality, diversity and inclusion.

The judging panel consists of an experienced jury of around fifteen working practitioners and industry peers. In the most recent awards, there was a 40% female to 60% male judging panel. The judges are announced on the day. Their decision is based on the exhibition experience and any information provided by the entry form. ABTT is not involved in any part of the judging process and there is an independent judging chair to manage the panel.

What you get

Winning entries will receive reasons for their success during the awards, as well as a commentary published afterwards with the judges' notes as to why they won. Winners receive: a certificate; a sustainable, engraved trophy; social media and editorial coverage; a press release; website acknowledgement; and photos published online.

Copper Leaf Assessment

ABTT makes a significant effort to ensure their awards are carried out as ethically as possible. Judges for each category discuss the entries alongside any discovered at the show that were not entered by the manufacturer. These awards are among the few to publish the reasoning behind their choice of winner.

They implement diversity as one of their core values and strive to apply this to all areas of their work. As a result, they are close to equal representation of men and women on their judging panel. They also source judges with diverse professional experience to include both newcomers and veterans of the industry.

ABTT were extremely forthcoming and gave detailed responses in our call.

ABTT have hardly any repeat winners

AV Awards

Product

Project

People/Company
or Team

Green

Description

These are held in London each November. Early bird entry fee currently stands at £160. These awards are described as the biggest and most prestigious evening in the AV calendar; the awards bring the industry together across all channels and disciplines within the market.

There are several types of award categories: people, company or team and product or technology, and a total of twenty-eight awards are on offer. There were 350 entries in 2022. Entry material requirements for each award include written material and testimonials. There is also an eligibility time-frame and product or technology awards must be available before the awards. Products to be launched following the awards will not be considered.

AV Awards have a two-stage judging process, a list of criteria is followed in the first stage to guide judges to shortlist a number of entries online. In stage two, the judges meet and entries are ranked on more detailed criteria to decide the winners. The judges do not judge all of the entries, they work in teams handling a few awards each, depending on their expertise in that area. For example, broadcast specialists will only judge broadcast related products. Within each team of judges there is a non-voting moderator to ensure debate is handled fairly. Whilst the judges discuss the entries, they score each entrant privately and are given a couple of days after the judging day to submit their final scores. We asked if once all of the scores were collected, if it is theoretically possible to ignore all of that and alter the results. We were assured that this does not happen. AV Awards have a two-stage judging process, a list of criteria is followed in the first stage to guide judges to shortlist a number of entries online. In stage two, the judges meet and entries are ranked on more detailed criteria to decide the winners. The judges do not judge all of the entries, they work in teams handling a few awards each, depending on their expertise in that area. For example, broadcast specialists will only judge broadcast related products. Within each team of judges there is a non-voting moderator to ensure debate is handled fairly.

Whilst the judges discuss the entries, they score each entrant privately and are given a couple of days after the judging day to submit their final scores. We asked if once all of the scores were collected, if it is theoretically possible to ignore all of that and alter the results. We were assured that this does not happen.

There are approximately 30 judges. The judges are chosen based on their knowledge and expertise in relevant industry sectors. The judges' names are made public and published on their website prior to the awards. This reassures entrants that their submission will be judged fairly, thoroughly and respectfully as they can see the calibre of judging. We asked if they consider diversity as part of their selection of judges, to which they said yes. In 2023 23% judges were women.

What you get

A reason given for each winning entry. Comments are broadcast when the winners are announced, and the events write-up afterwards includes details on why the winning entries were chosen. Shortlisted entries will receive social media coverage across various platforms. As well as this publicity, winners are promoted in AV's editorial space and receive a sustainable, metal trophy. AV's next awards are planned to be held in November 2024.

Copper Leaf Assessment

AV magazine has taken great care to make their awards process transparent and fair. They publish extensive information about the awards and their process on a dedicated website, including an FAQ section. The fact that judges physically meet ensures rigorous assessment of the entries. The use of groups of judging panels with non-voting moderators is good. However, they fail slightly because of the lack of consensus voting or not having a third party aggregate the final votes. We also think the final decision should be made on the day, to avoid accusations of collaboration. One serious negative point about the AV Awards is their green award. The judging for their 2023 award was completely opaque. It doesn't use the same judges and we don't know who judged it. Whilst being a laudable initiative, the winning company was not even incorporated until two months after the entry deadline. It only recently had a website and has no track record to demonstrate anything it is doing – no known customers, projects, green certifications or financials. This win opens the door for anyone to start a green company and win an award without having to back up their claims.

Overall, AV magazine was extremely forthcoming and open when approached about our report; taking the time to call as well as filling in a detailed form regarding their awards.

AV awards has relatively few repeat winners.

AVard Awards

Product

Project

People/Company
or Team

Green

Description

The AVard awards are relatively new having only started in 2020. They hold their awards to acknowledge and honour the forward-thinking products and solutions they feel deserve a platform.

They accept submissions through direct entry. Entrants must fill in an online form including the following: product image, important detail images, logo, and specific resolution requirements. Failure to meet these requirements gives the judges and organisation the right to exclude your entry in the voting. Written material is also available to the judges - a description of the submission. The description is mainly needed for the presentation of the product at the AVard awards ceremony: a brief description of the product, areas of application and target markets, as well as the USP for the selected category. There is a word limit of 500 characters minimum and 1,500 maximum in your written submission.

There is no cost to enter. In the event of a listing as a top five finalist, the entrant agrees to purchase at least two tickets for the awards ceremony. This ensures that representatives of the entry will be present to accept the trophy. These initial tickets are discounted, with additional tickets at the standard price. Tickets include: gala dinner, drinks and entertainment.

The top five finalists in the product category will be announced via their different platforms around a month prior to the awards ceremony, after the readers have voted. The top 3 finalists will then be presented at the AVard awards ceremony before the winner is announced.

What you get

The winner will receive their sustainable, glass trophy on the night of the awards.

Copper Leaf Assessment

The whole process for AVards is completely opaque. We don't know who the judges are or how the entries are evaluated.

Our research has been focused exclusively on publicly available information we could find about the AVard Awards.

AV News Awards

Product

Project

People/Company
or Team

Green

Description

The AV News Awards take place at ISE Barcelona. There are 14 awards across technology, companies and people. Entry material requirements include a 100-word background, five bullet points, and testimonials (internally and/or externally retrieved). Entrants are also able to submit video material, internet links and additional documents to be presented to the judges. The technology and organisation category requires a £120 entry fee; which covers admin costs, the winner's trophy, and means that any profit made allows AV News to continue to grow into a bigger event in the industry.

The six judges' names are kept private - with judges even signing NDA's - to avoid any influence from entrants. Despite remaining confidential, AV News say they are 'industry legends' and industry experts - at Director and CEO level. In previous awards the judges' names were mistakenly publicised so we are confident of their calibre. The judges judge all of the entries in the project category (e.g. education, corporate), following a consensus method to remain fair; whereas the people awards are internally judged by the magazine.

Although this cannot be confirmed, their 2022 judging panel consisted of a 2:4 female to male ratio, which changes from year to year. We asked if AV News considered diversity as a party of their selection of judges and they assured us that yes, 'we pride ourselves on diversity'.

The judging method adopts a two-stage process, whereby entrants are shortlisted after reaching a consensus of ten potential winners. They then vote anonymously for the finalists. The organisers prefer to avoid discussions that could influence or sway voting. We asked if once all of the votes were collected whether it is theoretically possible to ignore the votes and alter the results. They said the scores are handled by AV News but the person is not part of the editorial or sales team. There is one instance where credibility of the judging could be questioned. In the case of a tie-break succeeding the anonymous vote, the editor of AV News makes the final decision. AV News confirmed that there is a reason given for any winning entry, which is explained in editorial and online along with parts of their entry material.

AV News offer a sustainability award. However, this award is not given out every year, unless it is truly deserved. None of the judges are environmental specialists. This has been noted and we are assured that it will be looked into and hopefully corrected for future awards.

AV News will hold their next awards at ISE 2024 and include breakfast on the first day to promote networking and encourage business relationships and potential partnerships.

What you get

During the shortlist stage, entrants will receive editorial and online coverage, use of email signature and social media coverage across different platforms. The winners receive the same but are awarded with the winner's logo, mailshot, trophy and a winner's email signature. The trophy is now 100% glass, which is a sustainable improvement from previous years.

Copper Leaf assessment

AV News were extremely forthcoming and hope to make some changes for future awards. They declined to answer a couple of questions citing confidentiality. One of these was that they refused to give details on the number of entries. Our only concern here is that if they receive a lot of entries then using only six judges might give them too much work to do.

In the future they want the sustainability award to be more meaningful by involving environmental specialists in the final decision and they are also looking to broaden the judging material to include face-to-face presentations, where judges get the opportunity to learn about the entrants personally and their entry in more depth.

They have only few technology awards each year so it is a small dataset but Clevertouch and Samsung have won 30% of all awards. Notwithstanding that, these awards appear to be fairly judged and have a very modest entry fee.

AV News Awards Winners

CI Awards Programs

Product

Project

Green

Description:

BEST Awards

Are held at InfoComm. This event pays recognition to deserving AV products. There is an early-bird entry fee of \$445, followed by the standard fee of \$545 per product. Applicants submitting entries in additional categories for the same product are charged a further \$325 for each. There are between 40 and 50 awards each year with approximately 180 entries. There are currently no green awards. To be eligible for entry, the product must have either shipped in the 12-months prior to the deadline or is set to be launched in the 6-month period following. Products and services are judged on innovation, functionality, competitive advantages and benefits to the installer. With around 20 judges, there are no women and there is no range of ethnicity displayed across the panel. It was firmly assured - without prompting - that it is recognised this is not progressive for the industry and needs to change. This will be looked at for the next awards.

Integration Awards

Take place at InfoComm. These awards honour commercial AV installations. Applicants pay \$397 for the first project entered, then \$247 for each additional entry. There is a \$50 discount for an early-bird entry submitted within a given time-frame. There are 17 awards (16 project + one sustainability award), receiving between 40-50 entries. These awards are judged on the criteria of problem-solving ability. Again, there are approximately 20 judges; with no efforts to represent diversity in the industry. We were told this will change. Judging for the above awards is handled in an interesting way. Integrators judge the product awards and manufacturers judge the project awards.

BEST Awards

BEST Awards Event is at the Business and Leadership Conference, in Florida each February. Here, awards celebrate excellence in product innovation and target commercial technology in America. The first product entry fee stands at \$349 and \$249 for any subsequent entries. For non-NSCA members, the first entry is \$549; with subsequent entries being \$449 each. In 2019, it was recorded that these fees covered operational costs and marketing, as well as a small share left for revenue. There are 7 awards, which received 80 entries back in 2019. To be eligible, products must be available for sale and shipment before April. Entries will be judged on: scalability, versatility, deployment cost, ease of use, ROI, ADA compliance, and energy efficiency of the products. Currently, there are no green awards. With 7-8 judges in 2019, there was no diversity. At the time, they stated that diversity is not based on gender. The focus was on diversity of knowledge, experience and company size.

EPI Awards

Event is at the Business and Leadership Conference, in Florida each February. Here, awards celebrate excellence in product innovation and target commercial technology in America. The first product entry fee stands at \$349 and \$249 for any subsequent entries. For non-NSCA members, the first entry is \$549; with subsequent entries being \$449 each. In 2019, it was recorded that these fees covered operational costs and marketing, as well as a small share left for revenue. There are 7 awards, which received 80 entries back in 2019. To be eligible, products must be available for sale and shipment before April. Entries will be judged on: scalability, versatility, deployment cost, ease of use, ROI, ADA compliance, and energy efficiency of the products. Currently, there are no green awards. With 7-8 judges in 2019, there was no diversity. At the time, they stated that diversity is not based on gender. The focus was on diversity of knowledge, experience and company size.

TNT Awards

are held at ISE February. These awards target commercial and residential technology in Europe. Early-bird entry costs \$445, with a second option entry fee of \$545 per product. Submitting the same product multiple times gives you a further fee of \$325 for each additional category entered. There are 26 awards, with approximately 180 entries. There is no sustainability award. Again, with around 20 judges there is no diversity across the panel; but this is being looked into.

All of these awards are judged online by a panel of industry leaders alongside the editors of Commercial Integrator. The judges do not judge all of the entries, only those related to their area of expertise. Entries are judged using a points system. The total score for each entry is taken as an average from all the judges, disregarding their highest and lowest scores to avoid statistical bias. The winners are decided by the highest average score and are announced at their respective event.

A reason why an applicant won is briefly addressed in the awards ceremony, explaining how they met the list of criteria. This is elaborated upon in editorial, stating why they deserved to win. Unfortunately, entrants who did not win will most likely not be able to receive a reasoning as to why they were unsuccessful - as is often requested - because the judges' do not necessarily use the notes section while judging.

What you get:

BEST Awards

All entries are highlighted on the Commercial Integrator website's awards page, under the related category with a link to your website, product image and promotional description. All entries will receive social media coverage across all of Commercial Integrator's various platforms. Additional benefits for winners include: having your products printed in editorial, Award Winner's Logo, trophy, publicity on their website, as well as featuring in a webcast announcing the winners.

Integration Awards

Incentives to applicants include the possibility of website publicity, and an extensive marketing campaign. Winning entries will receive coverage in the July issue of Commercial Integrator magazine, with more than 25,000 subscribers. Successful projects are given more media exposure on Commercial Integrator's website and for a longer period of time. They will receive recognition during the awards show, and the Winner's Logo represents your achievement on your personal company's website and in your email signature line for one year following the awards.

EPI Awards

All award entries feature on Commercial Integrator's website, and are featured in an issue of NSCA's newsletter as well as their e-newsletter. Winners receive a trophy, social media coverage, editorial features, a Winner's Logo and participate in an interview style video published by NSCA.

TNT Awards

TNT entrants will receive: online promotion on Commercial Integrator, editorial listing, social media exposure, permitted use of the Winner's Logo (with a stated value of \$1,500), and an engraved plaque.

Copper Leaf Assessment

These awards require some of the highest entry fees in our research. In 2019, the organisers explained that the majority of this goes towards administration and staging. These entry fees are also used towards the cost of the trophies. Although a steep fee, you get some of the best coverage, so in publicity terms it can be good value. This is accessible to larger, more established organisations but it does disadvantage small, newer companies who will most likely not be able to afford this. For the Best and Integration awards, whilst it is a nice idea that integrators and manufacturers judge each others work, there is a potential conflict of interest for the Integration awards where a manufacturer may favour a project that uses its products. All the awards are largely handled by a project manager, independent of the editorial team, which reduces but does not eliminate potential influence of editorial interests. CI was very forthcoming with the information they offered in regards to: BEST Awards, TNT Awards and Integration Awards. We have not been able to discuss the EPI Awards, so our research relies heavily on what is accessible online as well as drawing upon our 2019 report.

We are concerned that the Best awards allow for products that may be released in the future, particularly due to the supply chain crisis. If the product is not released within six months do they withdraw the award?

Another observation is that a lot of similar manufacturers win most years. Whilst many of these are some of the leading AV manufacturers, 55% of all winners have won more than once. In particular Crestron has won 12% of all awards over the past eight years.

Future Group magazines Best of Show Awards: Installation, AV Technology, and TVBE

Product

Description

These awards run throughout the year at most of the major AV and broadcast exhibitions including ISE, IBC, InfoCOMM and NAB. The appropriate Future Group magazine(s) for each exhibition runs a campaign inviting manufacturers to enter.

All awards offer an early-bird entry fee of £365. After, the price increases to £410.

All applicants must submit an entry statement and photos of their product. They are judged on: quality, relevance, design, business/operational benefits, innovation, technical excellence, cost-effectiveness and game-changing ability. There is no environmental criteria and no green award.

Entries are judged by a team of Future publishing staff and other independent journalists who visit applicants' exhibition stands at the respective trade shows to evaluate the product in person. The judges' identities remain undisclosed, even when visiting the stands. The judges are given a set of criteria and use a points system to rank each entry. The winners are decided from both the statement and exhibition experience; and are published online following the event. Judges do not discuss entries with one another but report back to a chairman.

There is no reason given as to why a product won.

What you get

Nominees and winners benefit from dedicated editorial coverage, digital and social media exposure, a winner's logo for all successful entries, and an official nominee logo to use in marketing. Additionally, winners are awarded with a written certificate in a frame at the time of the show.

Copper Leaf Assessment

We question the use of journalists as judges. With respect to journalists, they lack the technical experience of industry practitioners. There is no consensus or discussion between judges. It is also bizarre that a judge visits the stand incognito and therefore misses the opportunity for a presentation and to ask questions, if they even attend at all...

The judging process is completely opaque. We only got any information on these awards from a conversation in 2019 and that was all rather vague, not all entries win, but the win ratio appears to be towards the higher end of our research.

These awards have little technical merit or demonstrable integrity but you do get a bit of publicity in return for a modest fee.

IABM BaM Awards (Broadcast and Media Awards)

Product

Project

Description

The BaM Awards are two separate awards events that take place at NAB show in Las Vegas and IBC in Amsterdam. They hold these awards as a way of “recognising innovation and creative benefits”. Using direct entry, submissions for BaM Awards are open to every company (whether an IABM member or not) that has launched a new product or service within 12 months of the submission date.

Each year, judges review more than 100 entries across 10 awards. Entry material requirements on the application form include: product name/submission title, launch date, brief summary (75 words), product/service function (60 words), detailed summary (300 words), why the chosen product deserves to win (300 words), state whether the product is embargoed or not, and if the work is their own or shared (give credit where credit is due).

IABM Platinum and Gold Members are eligible for 2 complimentary entries. Silver, Silver100 and Startup Members are eligible for 1 complimentary entry. For any additional entries, IABM Members will pay £195/\$300 (plus VAT where applicable) per entry. Whereas, non IABM Member entry is charged at £295/\$450 (plus VAT where applicable) per entry.

The judging process is explained openly online, with an FAQ link regarding commonly and presumedly asked questions about the awards. Judging is based on the perceived industry impact within the chosen category, in terms of end user benefit, value for money, innovation, implementation, performance or new opportunities created. Your application must highlight and clarify to the judges how your product, project or service meets these criteria. There is rarely enough time for the judges to research applications beyond what they receive from you. This time limitation could work against the genuine nature of the awards, as it may imply that the judges do not have enough time to rigorously and thoroughly judge all of the award entries.

Judging is carried out by a panel of 40 independent, specialist judges who represent all aspects of the broadcast and media industries. The judges' names are not made public. The individuals only work on their chosen categories. Following a two-stage judging process, the shortlisted entries will be announced two weeks prior to the show with the winners for each award announced at the event.

What you get

Entries on the final shortlist are filmed at the shows for a thirty-second video profile which is shown at the awards presentation. Winners have their video profile and an interview published on the IABM website. The IABM X account provides updates on shortlisted entries and winners. The winners are awarded with a trophy and then published on the website following the event. They receive a reason as to why they won, with the judges' comments then published in editorial.

Copper Leaf Assessment

The BaM awards stand up quite well for quality of judging with a lot explained online. Unfortunately, this year BaM did not participate in a call with us or fill in our form asking detailed questions about their awards.

As we assessed in 2019, although we still do not know who all of the judges are, IABM stated that the external panel members are non affiliated and strives to find a diverse group of experts from several different countries. Some parts of the process prove less clear than other, particularly in the early stages where submissions are handled internally before external judges are involved. However, the final choices remain an independent decision from the IABM.

InAVate APAC Awards

Project

People/Company
or Team

Description

The AV Integrations Awards Programme for Air Pacific is held in November. This event celebrates innovative technology, well-executed projects, and the people involved. In 2023 they had a total of 13 awards.

Entry material requirements for project awards include submitting a form; you can create your own or use the template they offer on their website. Eligible projects must have been completed within a given time-frame. In the entry document, you are expected to include: an overall summary, client brief and requirements, entry statement and objectives, consideration of the environment, and external testimonial. Video links are also encouraged.

What you get

Winners will receive video coverage, which will then be published on their website.

Copper Leaf Assessment

The requirements for the judging material and the specific criteria are quite strict, but we are unsure of how rigorous the judging process actually is. The judging expertise and experience of the panel is unknown, as they do not disclose their identities. This leads us to question the credibility of these awards. And, considering they use a points system to judge, questions arise as to who handles these scores and what happens to the results after they are collected. It would be reassuring to know if an impartial, third party - independent of InAVate APAC - handled the votes.

InAVate declined to participate in our research.

InAVation Awards

Product

Project

People/Company
or Team

Green

Description

The Innovation Awards are held in the evening during ISE, Barcelona. These awards celebrate innovative, unique technology, well-executed projects, distributors and consultants of successful projects. There are three main categories which each follow different judging processes. Within these categories, there are 25 awards; including a sustainability award. In 2019, InAVation collected a total of around 300 entries. Entries must have been created within one year of the entry date. Their submission must reflect a solution-focused approach and demonstrate innovation.

For technology awards, a panel of judges use a scoring system to put together a shortlist of entries based on the statements submitted by applicants. Winners are decided from this shortlist using public voting, which is limited to one per individual and weighted by job function from end users (worth 10 points) through to distributors (worth 5 points).

In line with our 2019 report, we think that the project and people awards are judged by internal and external panels.

The winners for all categories are announced at the InAVation Awards dinner. We think that a voice over on the night briefly explains the judges' choices for each winner.

What you get

Winners receive a sustainable, glass trophy and are filmed on the night of the awards. This video is later published online on the InAVate website, which is updated throughout the event as winners are announced. Shortlisted entries are published on the InAVation website. Some of the winners will also be featured as case studies in InAVate magazine. Additionally, if an applicant is unsuccessful, they can get feedback four weeks after the shortlist has been announced to query their entry.

Copper Leaf Assessment

Having previously and very vocally criticised the use of entry fees, InAVate now do charge a modest fee for entering some categories. We just wish we knew more about how these awards were judged. The process is amongst the most opaque.

Statistics show that year on year a significant proportion of awards are won by the same companies; Crestron and Extron have won 20% of all technology awards over the past eight years, with the latter winning every single year.

InAVate declined to participate in our research stating that they didn't feel they needed to justify their awards. We disagree. If they expect people to spend time and effort preparing entries and to pay over £400 to attend their event, it is reasonable to expect them to demonstrate that their awards are judged competently and fairly.

Crestron and Extron have won 20% of all inAVation awards

MONDO-DR Awards

Project

Description

Held in June at InfoComm in alternately in Orlando or Las Vegas. For each show, there are eight categories for different types of installation projects. Applicants pay a £100 entry fee for their first project and discounts are available for subsequent entries.

Anyone is able to submit a project for judging - which is carried out online - by providing a written statement and optional video. Shortlisted entries are sent to judges across the globe, who independently evaluate all projects using a points system before submitting these scores to be combined.

The judges and their areas of expertise, as well as judging criteria, are all listed on MONDO-DR's website and the organisers are open to enquiries about the process. Within the entry submission, all applicants must include the other parties involved in their project, to ensure everyone's achievements receive fair recognition.

The award is given to the highest scoring entry in each category and announced at the respective awards show.

As well as an award for each type of installation, an overall winner is also announced.

No information is given as to why an entry won.

Copper Leaf Assessment

In 2019, Mondo confirmed that they were working towards more transparency and better processes. Since our last report, we have not seen much change in the way they run their awards. We have based our findings wholly on publicly available information. We received no response to our queries of a phone call or subsequent online form created to ask detailed questions about their awards.

NAMM TEC Awards

Product

Project

People/Company
or Team

Description

These take place at the awards night in January, hosted by the NAMM Foundation. The awards are free to enter. Anyone can submit a product or project in one of 3 categories: technical achievement, creative achievement, or studio design project. The NAMM board compiles a list of all entries along with their own selections, from which they create the first shortlist. This shortlist is sent to a judging panel of 200 judges all over the world, selected by the NAMM board. The panel selects the final nominees who are announced in July. Shortlisted entries must provide a description and photos for a 'Digital Voter's Guide' and online voting opens in November. Only members of the NAMM Foundation, subscribers to some industry magazines or members of specific trade associations may vote. Eligible voters receive an individual email code to access the ballot. Voting aggregation is handled by an independent company and winners are announced at the awards show.

What you get

Winners get a trophy; we cannot confirm whether these are sustainable or not. They are photographed during the awards show for extensive social media coverage by NAMM on the night. Winners are listed in 19 different industry magazines.

Copper Leaf Assessment

An independent company manages the voting process to prevent interference from the hosts, although the NAMM board decides the first shortlist. The voting process can be considered a step up from public online voting, as only those involved in the industry are invited to vote and individual access codes limit voting activity. However, there is no guarantee that all voters take appropriate time to consider all 120 entries, and the limitations of public online voting - albeit reduced in this process - are still present.

We have based our findings wholly on publicly available information. We received no response to our queries of a phone call or online form asking detailed questions about their awards.

Parnelli Awards

Product

Project

People/Company
or Team

Description

The Parnelli Awards openly explain their judging process online. They claim that the nominations are tallied and reviewed for authenticity and accuracy by the panel. Following a two-stage judging process, up to six nominees for each category are then finalised and announced on their site, through an email blast and in Projection, Lights and Staging News and Front of House magazines. Then, individual subscribers (not just readers) are allowed to vote on their web site's secure voting page. They have imposed a one vote per subscriber rule, in which each vote must use the subscriber number printed on their copy of the magazine's mailing address label.

The judging panel consists of a Board of Advisors. Today the Board includes 19 of the industry's top professionals. Currently, this judging panel consists of only a 3:19 female to male ratio.

What you get

Winners will receive a personalised plaque on the night of the awards. We are unsure as to whether or not these are sustainable. Successful applicants will also be archived in 'past winners' on the awards website. Following the awards, the most recent winners will receive a brief justification as to why they won on the Parnelli website. This is great coverage and publicity, considering they have a reach upwards of 40,000 subscribers.

Copper Leaf Assessment

Currently, the Parnelli Awards are lacking in their initiative to represent diversity across the judging panel; only meeting a 3:19 female to male ratio.

They have attempted to put a safeguard in place to ensure fair and accurate online voting; by limiting votes to one per subscriber. However, this is undermined by the handlers of results being the awards Board of Advisors. Being directly involved with the awards may lead to questions about their intention and potential of altering the results. This cannot be confirmed, but is theoretically possible. If there was a third party involved, these awards would hold a lot more value. There has been a pattern across recent years - shown in our table of past winners - which showed product winners who continuously win.

The media coverage you receive from winning is a great incentive, when considering their large following of approximately 40,000 subscribers. If you win, this is an extremely influential platform to advertise your entry.

PLASA Awards

Product

People/Company
or Team

Green

Description

The PLASA Innovation Awards are held in September at the PLASA Show in Olympia, London. The PLASA Show is a trade event open to anyone who works, or has an interest, in the entertainment technology industry. The PLASA Awards are widely respected throughout the entertainment technology industry; the awards recognise and reward next-generation products and the people behind them. The awards are run in association with LSi magazine, which provides extensive exposure for all vetted entrants and winners of the awards. Products can be entered directly by the manufacturer or - with the manufacturer's permission - by an officially appointed representative exhibitor.

Nominated products must have been launched after the previous award show (within the last 12 months). Nominees must complete the online entry form in detail, with an image and technical specification. This information is available to the judges and is your choice to promote the innovative aspects of the product. To be advantaged, the product should align with at least one or more requirements in the entry criteria: improves technical practice, demonstrates a new style of thinking; introduces new technology, materials or technique, includes patents or unique intellectual property, and offers a new commercial advantage and improves safety. The form will include a brief product overview (100 words maximum), full product overview (unlimited word count), date of launch, date of emerge (if applicable), and in some cases a URL link to technical specification.

PLASA charges an entry fee; to cover all administration costs, judging expenses and the cost of exhibiting the product in the Innovation Gallery at the PLASA Show. The entry fee for each nomination is £500 + VAT for exhibiting, £750 + VAT for non exhibiting PLASA members, and £950 + VAT for non-exhibiting non-members. In addition to covering their costs the awards contributed £3,000 to charity in 2023.

In 2023, the judging team was comprised of twelve independent technical specialists from a wide array of backgrounds.

The judges can award up to eight Innovation Awards, and one sustainability Award for products that show impressive credentials. There are no categories, just eight awards for innovation. However, the judges may choose to upgrade any number of these to 'gold' for particularly innovative products. Some years no gold awards are given, sometimes one, perhaps two. The PLASA Awards for Innovation are independently and impartially judged by a team of trusted industry experts. All successful nominees make a 5-minute presentation to a panel of judges who will visit their stand during the Sunday of the Show. The judging method is openly explained online. The judges visit the gallery and review the products, they are then given a judging pack with written entry information. They then discuss which products they would like to shortlist. Once this is mutually agreed in the decision method of a consensus, they divide into two groups and visit each stand. In some years, they have even brought a video crew with them. A company representative then gives a product presentation to the judges and answers any questions; this video is later posted by LSi. The panel of judges then meet again, and if there are any further questions, the judges from one group may visit some of the other group's stands. The final decision is reached through consensus. At no time are PLASA or LSi aware of the judging process until it is complete. The PLASA Lifetime Achievement Award is based on nominated shortlists and internet voting.

PLASA have offered a green award for many years and it has barely been awarded. To be eligible for a sustainability award you must have achieved: significant reduction of power usage for its product type/application, effective use of renewable energy resources and a significant reduction of environmental impact of product life cycle. Note that this has not been given out every year - only when it has been truly deserved.

What you get

All nominated products are showcased in the Innovation Gallery at the PLASA Show, as well as all year round on the virtual Innovation Gallery. Pre-show exposure means the nominees benefit from inclusion in the PLASA Show Preview Issue of LSi Magazine and online Innovation Gallery. Plus, the award entries are promoted across the PLASA social media channels. At the show, nominated products will be exhibited on the Innovation Gallery - a key visitor attraction at the PLASA Show. In line with their rigid judging on the sustainability awards, their trophy is made from glass. Finally, post show coverage includes the winners appearing on the LSi website and in the October issues of LSi and LSA magazines. Plus, all winners will remain on the show website all year round and in the virtual Innovation Gallery. The judges will co-write comments for the speech by the managing director of PLASA who announces the awards, these includes a few lines about each winner and details of some 'highly commended'.

Copper Leaf Assessment

PLASA itself and LSi their magazine, have no involvement in the awards process other than for some administration in advance and the physical staging of the Innovation Gallery. The awards are handled by an independent chairman and team of judges.

There is no opportunity for influence from PLASA or the magazine. However 30% of all awards have been won by six companies.

Based on internet voting, the lifetime achievement is not transparent at all. This is a shame as in comparison the Innovation awards are amongst the best.

Plasa Award Winners

rAVe Best of InfoComm

Product

People/Company
or Team

Description

Held at InfoComm, these awards have no entry fee, insisting that they avoid pay-for-play at all costs. rAVe sends reporters to every single booth on the show floor and shoots videos of every product shown. Exhibitors do not submit individual entries. They then assess their findings and winners are announced a few weeks later.

What you get

There are online announcements and a dedicated web page lists the winners.

Copper Leaf Assessment

rAVe visits each and every stand, but we do not know who these reporters are or their qualifications to judge thoroughly and effectively in the AV industry. Nor do we know what criteria is used to decide on a winner.

Given that the judging process is completely opaque, it is not clear how much you can really value these awards. We have based our findings primarily on publicly available information. Other than a brief statement they gave us no information about their awards.

rAVE Readers' Choice Awards

Product

Description

Unlike the typical AV Awards, these are exclusively nominated by the readers. They say they receive between 80,000 and 90,000 nominations each year. After the initial nomination process, a shortlist is compiled and then announced, whereby readers vote again. rAVE take pride in the value of these awards, saying no one internally involved at rAVE has any influence. It is totally reader selected and trusted. Categories include those from manufacturers, websites, social media presence and products. It appears that nominations can be given for any product regardless of age, so sometimes a company will win for the same product in more than one year.

What you get

Winners receive a unique trophy; looking at photos it appears to be sustainably made. There are also online announcements and a dedicated web page lists the winners.

Copper Leaf Assessment

There is little information about how these awards are run, and in many ways you don't need much. It's very simple; one round of nominations and two rounds of voting.

68% of all RAVE readers choice awards have been won by eight companies

RAVE make a strong statement about these awards not being 'pay for play' as if that fact makes these awards meaningful and they have previously implied that other industry awards are #fakeawards due to them asking for entry fees.

There are no criteria upon which to judge, other than expecting thousands of voters to do their own research and assessment. We do not know how many entries are shortlisted, but even if there are at least two shortlisted per category, voters would have to review at least 60 entries. Few would assess that volume in thorough detail.

To be fair to rAVe, they no longer promote these awards as 'the best' products, simply as favourites as voted for by their readers. However, we cannot attach much value to these awards. Voting is done online by the public with no scrutiny over how to judge. There are no details about how the votes are handled by the organiser.

These awards have the narrowest set of winners. Over the past nine years, 68% of all awards have been won by ten companies and Barco alone have won 15% of all awards. The proportion of awards won by those same eight companies has increased further in 2023. With the exception of Zoom, all the winning companies are more than 20 years old and just five companies with a turnover of less than \$100m have ever won.

Every year, having run social media campaigns asking people to vote for them, a similar group of large AV manufacturers win these awards.

It's not entirely clear what this whole exercise achieves.

rAVe Reader's Choice Awards technology winners

Smart Building Awards

Product

Project

People/Company
or Team

Description

The Smart Building Awards owned by Essential Install Magazine are held in the Village Hotel, Farnborough in September. These aim to deliver the most representative, inclusive and up to date awards initiative in the AV/install world. These awards are completely free to enter. There are 25 categories between products, projects and companies. At the moment, they do not offer awards in the sustainability category. Entrants are not restricted to submitting for just one category, they can enter as many of the 25 awards as they wish.

Each award is be judged fairly by an expert panel based on the criteria set out for each category. The judges will individually score each entry. There is a qualifying period which will define which entries will be valid. This period was last set between January 2022 and June 2023. This means that any product launched, or project completed, before of after these dates will not be eligible to enter.

Each category has a 500-word limit, while a further 250 words is available to explain why you think you deserve to win the award. There are different criteria for each awards category, and while it is not mandatory to meet every criteria point, there will be a certain number of boxes you will have to check before your entry is eligible.

Product entries are judged based on three criteria. The judge will give a weighted score based on the overall quality of the product. Additional materials required include supplying up to three images of the product. They also require an image of the company's logo. Similarly, project entries are judged based on three criteria. The judge will give a weighted score based on the overall design and execution of the project; judging off the words provided. Additional scores will be given out for both customer satisfaction and innovation. In order to judge projects on design, entrants are asked to supply up to eight images, as well as an image of the company's logo. All entrants in all categories may also supply up to one page of supporting evidence; such as testimonials, press coverage, case studies and/or spec sheets.

What you get

Each winning entry will receive coverage across print; Essential Install magazine, digital platforms, newsletter and website, as well as dedicated smart building awards newsletter e-shots, underlining the excellence achieved in their chosen field. The winners will receive their sustainable, glass trophy at the awards dinner.

Copper Leaf Assessment

Except for addressing the judging method in detail and the system of point scoring deciding the winner, we have no information about who handles the votes and the process of choosing the winner once scores have been collected. We do not know how involved the magazine is in the awards process, and whether involvement could bring about questions of bias.

We are trusting that the judges really are an expert panel with extensive knowledge and experience within the AV industry, but we do not know who the judges are, we do not know their qualifications, and the value they bring to these awards. If they are all experts in the awards they are judging, then these awards would be of respected value. But, if these judges are voting from a position of ignorance because they are assessing entrants unrelated to their specialty then how valuable would these awards really be?

We have based our findings wholly on publicly available information. We received no response to our queries of a phone call or subsequent online form created to ask detailed questions about their awards.

Sports TV Awards

Product

Project

People/Company
or Team

Green

Description

The Sports TV Awards take place in the DeLeMar Theatre, Amsterdam. These awards acknowledge companies, teams and individuals who have excelled in sports broadcasting and production that year. It is free to enter. Entrants submit using direct entry; all entries must have a direct European connection either through the company being put forward, the event being covered, the service being offered, or the initiative being undertaken. There are six awards within the people, company and project categories. Entry material requirements include an executive summary of your entry in no more than 200 words, written supporting documents and URLs for supporting video where required. There are restrictions against submitting video material. Sports TV do not issue an entry fee.

These awards include recognition in sustainability to those who can demonstrate an impactful contribution to the transition to a net-zero carbon and zero waste society. They actively honour diversity within the sports production and media industry, encouraging the inclusion of women. In the One Planet and Women's Diversity categories, the initiatives put forward in the entry must have been in action in that same period.

These broadcast and production awards are judged by a panel of industry experts; made up of SVG editorial and independent industry figures under the guidance of SVG Europe themselves. They gather 24 judges, whose names will be made public on their website in the lead up to the event. Although the judges' names are made public, which would make them more traceable, there has been an attempt to put safeguarding methods in place to protect the authenticity of the results. They state clearly on their website that any malpractice and inappropriate contact may lead to disqualification from the current and future awards.

The judges use the written documents provided in the application as the main source of material to judge by. The sporting event, tournament, league, race or match being entered for an award must have occurred within the 12-month period prior to the awards, and been televised publicly by a broadcaster or online service.

What they get

After the initial process, a shortlist of entries in each category will be announced. Each shortlist will be contacted personally. Sports TV aim to make a public announcement before the end of July to publicise the shortlists before the awards take place. During the shortlist period, SVG will offer publicity exposure support, but it may be expected in return that the shortlists push SVG Europe's publicity - primarily through social media coverage across various platforms - in the run-up to the event. The judges' comments and reasons regarding the winning entries are published editorially.

Copper Leaf Assessment

Sports TV have encouraged gender diversity and green initiative by running the One Planet and Women's Diversity awards. These awards strive for inclusion and equality, as well as bettering the planet in an already challenging industry of broadcast and production. Although the judging panel includes independent industry experts, it is infiltrated by SVG editorial figures and is under the guidance of SVG Europe themselves. Therefore, judging could be somewhat influenced by editorial interests.

A justification for the judges' decision is published editorially. The shortlist process and detailed comments released afterwards leads us to believe the entries are genuinely and thoroughly judged to award the most deserving winner, despite the possibility of editorial and entrant influence.

TPMEA

People/Company
or Team

Description

The TPMEA Awards are held every year in May. Their publication is Total Production Middle East and Asia. They present people awards for deserving individuals in the AV industry in the Middle East and Asia.

They have adopted a two-phase approach where people can be nominated, or individuals can nominate themselves. The editorial team then shortlist about 5 entries per each category. There are 22 awards up for grabs. In their recent awards, they received 900 nominations from more than 4000 votes. All except three of the awards are judged through public voting; 3 awards are judged by selected and respected individuals (judging panel). Editorial collates their own material in regards to what they use to judge the entries by.

There is no cost to enter the TPMEA Awards. The three awards that are judged conventionally consist of a judging panel comprised of previous year winners. There are approximately 20 judges for these. All of the judges do judge all of the entries, and the judges' names are made public prior to the event. Considering that the judging panel is full of previous year winners, it is inferred that they would be more than qualified to judge; making informed and knowledgeable decisions.

TPMEA follow a two-stage judging process. The shortlist of nominations is made public about a month prior to the awards ceremony. During the shortlisting process, the judges do not confer with one another. The top 5 finalist list is decided by the ones with the most nominations. They make the names of the finalists public a month prior to the event, and then they leave it to the public to vote for the winner. Once all of the scores have been collected, the magazine handles the votes, so there is that doubt that it could be theoretically possible for them to ignore all of the data, and alter their results. There is no reason published or given as to why the winners were chosen except for the pragmatic understanding that, "the most amount of votes is why it won".

What they get

Shortlisted nominations are published on the website, receiving editorial and social media coverage. There is not too much media coverage for shortlists or winners. The shortlist is made a month prior to the event. As well as the above, the winners also receive a sustainable trophy with their name engraved.

Copper Leaf Assessment

At the moment, TPMEA do not offer awards in the sustainability/green category.

The judging could be considered somewhat rigorous, taking into account the experience and knowledge of the judging panel and the time they have to judge all of the awards thoroughly. However, the judging is done independently - without conferring with one another - and then individual scores are handed over to the magazine. We believe it would be beneficial for the judges to meet and discuss their thoughts on the entries to give a more meaningful, deserved award. Additionally, editorial involvement could lead to questions of how likely it is for TPMEA to ignore the data they receive from online nominations and judges' scores, and manipulate the results to give their desired outcome. Whilst we are not implying this is the case, we are merely pointing out that it is theoretically possible.

TPMEA were extremely forthcoming and gave detailed responses in our call.

How best to judge

This wide spectrum of judging across the industry prompts several questions.

In some instances, we do not know the judges' identities, their qualifications, or how a winner is decided. If the process is not openly explained, then how do we know if entries are being handled competently, fairly and honestly?

If judges do not confer with one another, a number of concerns surface. We understand that it is impossible to find a judge who can extend their knowledge equally across every aspect of our industry and its technology. But, for some awards, the judges may assess entries from a position of ignorance. Their area of expertise may differ from some of the awards they judge. For example, a specialist in corporate boardroom AV is unlikely to have the direct experience to understand the complexity or benefit of innovation in festival sound systems, in which case their evaluation of the entry would not be of value or at all representative. Whilst it is unrealistic to expect all awards to enlist a full panel of specialists for every category, discrepancies in experience can be mitigated by group discussion between the judges. On the basis that all the judges have a grounded knowledge of the industry in general, explanations from fellow adjudicators with relevant expertise would enable them to more accurately evaluate an entry.

If judges work in isolation, we do not know how long they spend on each entry and whether sufficient scrutiny is given. And is sufficient scrutiny even possible if judges do not speak with the entrants or see the entry themselves? In some cases judges are given too many entries to evaluate.

Provisions are needed in case one judge scores everything with consistently high or low marks, or if others have a large variation in their scoring. Simply adding up scores up may not give the same result as seeing which contender got the most first choices.

If we do not know who the judges are, or if internet voting is used, then it is not possible to resolve any conflicts of interest, nor is it clear how confidentiality is dealt with. Details of some projects cannot be publicly shared, but permission may be given to a small group of judges.

For all the reasons above, we believe it better if judges talk to each other.

If judges do discuss entries, there may be a concern that one or two may dominate the meeting to influence the result, a non-voting moderator might help. Some awards are based on internet voting where anyone can get involved.

In this case, no one has any idea who is voting, what their skills are, how long they look at any materials or whether they were asked to vote by their employer or someone they have a business relationship with. We have publicly demonstrated setting up fake email accounts and being able to vote for this type of award. Manufacturers run social media and email campaigns asking people to vote for them.

Our view is that you cannot consider public Internet voting as competent or fair scrutiny. The most optimistic interpretation of any award won this way would be to call it 'favourite', and not 'the best'.

AWARDS	ENTRY A	ENTRY B	ENTRY C	ENTRY D
JUDGE 1	80	85	95	100
JUDGE 2	10	90	30	40
JUDGE 3	15	10	5	20
JUDGE 4	30	20	10	40
TOTAL	135	205	140	200

In the above (admittedly facetious) example, entry B wins, even though it was most people's third choice, entry D loses despite being most people's first choice and didn't come lower than second.

Awards methodology

Industry awards do a number of things including; highlighting achievement and innovation, giving opportunities to network with colleagues, raising money for charity and raising the profile or providing a much needed revenue stream for the organisers.

Why we did this

We often get questions from clients about what awards they should enter, but until our report in 2019, our advice was mostly anecdotal. There has been some fairly vocal criticism about some awards and, dare we say, mud-slinging between some competitor events. We wanted to apply some data in order to give a balanced view.

Some of our team have been involved in judging industry awards for nearly twenty years and have shaped how some awards are judged. We also prepare materials for client award entries.

The three big questions

Fundamentally, we wanted to answer these questions:

1. Is the time, effort and cost to enter worth it against the potential exposure you might receive?
2. Is the judging process credible, making it an award that actually means something?
3. Could there be bias or subterfuge?

What we did

Our investigation covered various elements:

1. Researching each award and how they are managed and judged
2. Analysing how transparent the process is and whether there is an opportunity for bias
3. Reviewing what shortlisted and winning companies receive in terms of exposure
4. Analysing technology/product award winners over several years

Our research was primarily gathered online from publicly available information, but we also conducted telephone interviews with some publications. In addition to this, we sent out online forms asking detailed questions to all awards organisers.

How are awards judged?

The method of judging, competency and transparency of the process reflect the integrity of an award.

1. Judged by a face-to-face panel that discusses each entry
2. Judges privately score each entry
3. Internet voting open to anyone
4. Judge or judges visit exhibition standards and then score the entries. This visit may be in secret, or with a panel product presentation

What we wanted to know

1. How are judges chosen?
2. Are the judges qualified?
3. Has an effort been made to represent diversity across the judging panel?
4. Are the categories judged in a way where there is genuine scrutiny?
5. How are conflicts of interest dealt with?
6. How many entries are judges expected to review?
7. Is there bias towards those who pay to enter, advertisers or specific companies?
8. Is enough information submitted to make a fair judgement?
9. Are there genuine safeguards to ensure fairness?
10. Are any awards demonstrating green initiatives?
11. If they have too many entries their time commitment may be unreasonable and they may not scrutinise in sufficient detail
